PPC-CM4-133 Product Overview

Product Overview

The Cortex[®]-A72 Raspberry Pi[®] series PPC-CM4-133 (PN: CS19108RA4133) is a high-quality industrial Pi PC. It features a 13.3" Ten-point capacitive touch screen with a resolution of 1920 x 1080 pixels and brightness of 400 cd/m².

Key Applications

- Human Machine Interface HMI
- Process Control
- Process Monitoring
- HMI
- IIoT node
- · Environmental Monitoring
- PLC
- Automotive applications
- ATM...

It is available both as an embedded solution and as a device hosed in a casing with bezels, thus facilitating different installation options:

- Installation on an industrial cabinet
- Integration with the existing equipment

The PPC-CM4-133 industrial Pi PC is based around the powerful Raspberry Pi[®] Compute Module 4, powered by the Quad Cortex[®]-A72 processor with a processor speed of 1.5GHz.

PPC-CM4-133 Ordering Options

Ordering Options

Chipsee products can be customized during the ordering process. The product will be shipped with the pre-installed factory defaults if no extra requirements are specified. The table in the Specifications section provides information about the default options bundled with the product.

Note

You can order PPC-CM4-133 from the official Chipsee Store or from your nearest distributor.

Pi® CM4 Module

The Pi[®] Compute Module 4 appears in different versions depending on the size of the DDR4 and eMMC.

The PPC-CM4-133 industrial Pi PC does not include the CM4 Raspberry Pi[®] module by default. If you would like to purchase it with a CM4, you can select it at the Chipsee store during the ordering process.

Operating System

This product comes with a pre-installed Debian OS. Chipsee software engineers have created all the drivers, so every hardware feature is readily available for any standard development tool.

If your project requires a different OS, please **Contact us**, and we'll make a customized version that suits your needs.

Optional Features

The PPC-CM4-133 industrial Pi PC does not include the 3G/4G/LTE modules by default. These modules are optional and can be selected at the Chipsee store during the ordering process.

Warning

Installation, repair, and maintenance tasks should be performed by trained personnel only. Chipsee does not bear any responsibility for damage caused by inadequate handling of the product.

PPC-CM4-133 Specifications

Specifications

The PPC-CM4-133 industrial Pi PC offers a broad range of performance and connectivity options for scalable integration, providing expandability according to future needs. Some of the key features are listed in the table below.

PPC-CM4-133				
CPU	Raspberry Pi [®] CM4, CM4 Lite; Quad Cortex-A72 at 1.5GHz			
Storage	Support for 1 x TF Card3			
RAM	2/4/8 GB, Based on CM4			
еММС	16/32 GB, Based on CM4			
Display	13.3" IPS LCD, 1920 x 1080 resolution px, brightness 400 cd/m ²			
Touch	10-point capacitive touch with 1mm Armored Glass			
USB	2 x USB 3.0 Host, 1 x USB OTG			
LAN	1 x Channel Giga LAN			
Audio	3.5mm Audio Out Connector, 2W Speaker Internal			
Buzzer	Onboard Buzzer, driven by GPIO			
RTC	Yes, High Accuracy RTC with Lithium Button Coin battery (lithium battery not included)			
RS232	Default to 2 x RS232, up to 4 x RS232			
RS485	Default to 2 x RS4851, these 2 x RS485 can be configured as 2 x RS232			
CAN	1 x CAN-BUS			
GPIO	8 Channels, 4 Input, 4 Output			
12C	Not Supported			
WiFi/BT	Supported but depending on the CM4 selected2			
ZIGBEE	Onboard Zigbee module, not mounted by default			
нрмі	Not Supported			
SATA II	Not Supported			
3G/4G/LTE	Supported, not mounted by default			
Camera	No			
Power Input	From 12V to 36V			
Current at 12V	1333mA Max			
Power Consumption	16W Typical			
Working Temperature	From 0°C to +60°C			

PPC-CM4-133 Specifications

PPC-CM4-133				
OS Debian				
Dimensions CS19108RA4133P: 355 x 225 x 55mm				
Weight CS19108RA4133P: 3000g				

Table 255 Key Features

- 1 The RS485 circuit controls the Input and Output direction automatically, there's no need to control it from within the software.
- 2 The default product without the CM4 does not include a Wi-Fi/BT module. You can include a CM4 that has the Wi-Fi/BT module at the Chipsee store during the ordering process.
- 3 This TF card is designed for storage expansion, as the TF card uses the same pins with WiFi, it can't be used with WiFi at the same time

PPC-CM4-133 Power Input

Power Input

The PPC-CM4-133 industrial Pi PC can be powered by a wide range of input voltages: From 12V to 36V DC. It is a **3 Pin, 3.81mm screw terminal** connector. As shown in the figure below.

Power Input

Note that the "+" sign represents the positive power input, and it is printed both at the casing and as a silk-screen on the board of the embedded version. The "-" terminal is shorted to the ground.

Power Input Definition				
Pin Number	Definition	Description		
Pin 1	Positive Input	DC Power Positive Terminal		
Pin 2	Negative Input	DC Power Negative Terminal		
Pin 3	Ground	Power System Ground		

Table 256 Power Connector

The system ground "**G**" is connected to power negative "-" on board.

PPC-CM4-133 Touch Screen

Touch Screen

The PPC-CM4-133 industrial Pi PC uses a 10-point capacitive touch screen. However, the Debian OS supports only One-Point touch.

The figure below shows the capacitive touch screen connected to the motherboard via the USB connector.

Capacitive Touch Connector

Attention

A capacitive touch screen is susceptible to power noise and Electromagnetic Radiation (EMR). It may cause LCD ripples or even capacitive touch malfunction. If using a capacitive multi-touch test application, you might notice the touch points float erratically across the display. There are several solutions to this problem:

- 1. Use a high-quality Power Adapter Unit (PSU) with low EMR. You can also provide power from a battery.
- 2. Make sure that the PPC-CM4-133 Power Input connector (pin 3) is properly connected to the Power System Ground to provide sufficient EMI shielding and eliminate the problem entirely.
- 3. Bad GND problems can also be confirmed by touching pin 3 of the Power Input connector with one hand while operating the capacitive touch screen with the other hand. In this case, the operator's body acts as the Power System Ground.

PPC-CM4-133 Connectivity

Connectivity

RS232/RS485/CAN

The serial communication interfaces (RS485, RS232, and CAN) are routed to a phoenix terminal, as illustrated in the figure below.

RS232-RS485-CAN on the PPC-CM4-133 Industrial PC

Attention

- 1. RS485_3 and RS485_5 can control the input and output direction automatically. There's no need to control it from within the software.
- 2. The 120Ω match resistor for RS485 is **already** mounted by default.
- 3. The 120Ω match resistor for CAN is **NOT** mounted by default. Be sure to mount the match resistor when testing CAN.
- 4. The 2 x RS485 can be configured to 2 x RS232, if you want a custom configuration, you can contact us when placing an order.

The table below offers more detailed description of every pin and its definition:

RS232 / RS485 / CAN Pin Definition:				
Pin Number Definition Description				
Pin 1	CAN_H	CAN BUS "H" signal		

PPC-CM4-133 **GPIO Port**

RS232 / RS485 / CAN Pin Definition:				
Pin 2	CAN_L	CAN BUS "L" signal		
Pin 3	RS485_5-	CPU UART5, RS485 –(B) signal		
Pin 4	RS485_5+	CPU UART5, RS485 +(A) signal		
Pin 5	RS485_3-	CPU UART3, RS485 –(B) signal		
Pin 6	RS485_3+	CPU UART3, RS485 +(A) signal		
Pin 7	RS232_2_RXD	CPU UART2, RS232 RXD signal		
Pin 8	RS232_2_TXD	CPU UART2, RS232 TXD signal		
Pin 9	RS232_0_RXD	CPU UARTO, RS232 RXD signal		
Pin 10	RS232_0_TXD	CPU UARTO, RS232 TXD signal		
Pin 11	GND	System Ground		
Pin 12	+5V	System +5V Power Output, No more than 1A Current output		

Table 257 Connectivity Section

GPIO Port

The PPC-CM4-133 industrial Pi PC has a **phoenix connector**, as shown in the figure below. The table below gives details about the definition of every Pin.

Attention

- 1. In order to use the Isolated Output, you need to add an external Isolated Power to the VDD_ISO and GND_ISO. The power voltage should not exceed 24V.
- 2. The output current can achieve 500mA for every channel, but it also depends on the isolated power that is connected.
- 3. In order to use the Isolated Input, you need to add a signal to the ISO_InputX and GND_ISO. A $2.4 \mathrm{K}\Omega$ resistor, as R6, can be added to limit the input current, as shown in the figure above. This resistor should work well for the 5-24V input signal. If your input signal is less than 5V, please change this input resistor.

PPC-CM4-133 GPIO Port

Pin 4	IN3	Isolated Input 3			
Pin 3	IN4	Isolated Input 4			

Table 258 GPIO Connector Pin-out

USB Connectors

There are 2 x USB 3.0 Host, 1 x USB OTG onboard, as shown in the figure below.

USB HOST Connectors

Attention

- 1. These two USB host connectors can drive 500mA for each channel at most.
- 2. These two USB host connectors, Zigbee and 4G/LTE come from the same USB HUB.
- 3. When you connect this product to the HOST PC through the Type-C port, the USB HUB will be disabled. As a result, the two USB host connectors, Zigbee and 4G/LTE will not work.

The product has one USB Type-C OTG connector that works as a slave by default. You can use it to establish a connection with the host PC and for downloading the system to the eMMC of CM4 module.

Warning

- 1. Be careful not to touch surrounding electronic components accidentally while plugging in USB devices into the embedded Industrial PC version.
- 2. Remember to unplug the Type-C cable after flashing OS, otherwise the USB hosts won't work.

LAN Connectors

LAN (RJ45) connector provides Ethernet connectivity over standardized Ethernet cables as shown in the figure below. The integrated Ethernet interface supports up to 1 Gbps data throughput. These Giga LAN signals come from the CM4 module directly.

RJ45 LAN Connector

Note

Use CAT5 or better cables to achieve full data throughput over maximum distance defined by the 1000BASE-T standard (100m).

WiFi & BT Module

The default PPC-CM4-133 without the CM4 does not include a Wi-Fi/BT module. If you include a CM4 that has the Wi-Fi/BT module, the product will have Wi-Fi/BT feature. The enclosed (CS19108RA4133P) variant of the product also includes an SMA connector for an external WiFi/BT antenna, as illustrated in the figure below.

PPC-CM4-133 3G/4G/LTE Module

WiFi+BT Antenna

Attention

The product does not come shipped with the Wi-Fi/BT module by default.

3G/4G/LTE Module

The PPC-CM4-133 industrial Pi PC is equipped with a **mini-PCle connector** that can connect to a 3G/4G/LTE module. The customer will also need a SIM Card Holder and a 3G/4G/LTE antenna to ensure 3G/4G/LTE works on the PPC-CM4-133. SIM card does **NOT** support hot plug. **Power off** before inserting or removing SIM card.

SIM Card Direction

Figure 928: 3G/4G/LTE Module

Figure 929: SIM Card Holder and 3G/4G/LTE Antenna

Attention

The product does not come shipped with the 3G/4G/LTE module by default. If you need to use 3G/4G/LTE, you can contact us when placing an order, we can install the necessary hardware for you.

Zigbee Module

The PPC-CM4-133 industrial Pi PC supports an onboard Zigbee module. The Zigbee controller is TI CC2531, and the Raspberry Pi forum supports it.

For CS19108RA4133P, there is a connector on the backside of the case that you can use to connect the external Zigbee antenna, as described in the figure below.

PPC-CM4-133 Zigbee Module

Internal Zigbee Antenna

External Zigbee Antenna Connector

Zigbee Controller

Figure 930: Zigbee controller

PPC-CM4-133 Zigbee Module

Zigbee Antenna

Attention

The product does not come with the Zigbee module by default.

PPC-CM4-133 TF Card Slot

TF Card Slot

The PPC-CM4-133 industrial Pi PC features 1 x **TF Card (micro SD) slot**. A slot can address up to 128GB of memory.

TF (micro SD) Card Slot

Attention

- 1. The SD is used for memory extension. It can't be used for system boot-up.
- 2. This storage extension SD uses the same pins as WiFi on CM4. SD storage and WiFi **can't** be used at the same time.
- 3. The product does not come shipped with the TF card by default.

PPC-CM4-133 Audio Connectors

Audio Connectors

The PPC-CM4-133 industrial Pi PC features some audio peripherals. It has 1 x **3.5mm audio output jack**.

Also, the PPC-CM4-133 industrial Pi PC has a miniature 2W internal speaker for audio reproduction, as well as a small buzzer for alarm/notification sounds.

Audio Connector (enclosed PC version)

Attention

By plugging in the headphone cable, the internal speaker will be disabled automatically.

PPC-CM4-133 PROG Button

PROG Button

The PPC-CM4-133 industrial Pi PC has one button for entering usb download mode, as shown in the figure below.

When booting **with** the button being pressed, the Raspberry Pi will boot from the USB connector. You can use this feature to download the OS software to the internal eMMC. When booting **without pressing** the button, the Raspberry Pi will boot from the internal eMMC.

There is no need to press the button during regular operation. However, if you need to reinstall the OS, please refer to the detailed information on how to reflash the OS from the Software Documentation.

PROG Button

PPC-CM4-133 Mounting Procedure

Mounting Procedure

The PPC-CM4-133 industrial Pi PC can be mounted with $4 \times M4$ (6mm) screws using the **VESA** (100x100mm or 75x75mm) mount.

The PPC-CM4-133 industrial Pi PC can be mounted with **panel mount** method, enabling simplified installation onto any standard mounting fixture.

Attention

Please make sure the display is not exposed to high pressure when mounting into an enclosure.

You can find detailed information about mounting in the Mount IPC Guide.

PPC-CM4-133 Mechanical Specifications

Mechanical Specifications

CS19108RA4133P

For CS19108RA4133P, the outer mechanical dimensions are 355 x 225 x 55mm (W x L x H).
